

In the Claims

1.(Original) An isolated nucleic acid molecule consisting of a nucleotide sequence selected from the group consisting of:

- (a) a nucleotide sequence that encodes a protein comprising the amino acid sequence of SEQ ID NO:2;
- (b) a nucleotide sequence consisting of the nucleic acid sequence of SEQ ID No: 1;
- (c) a nucleotide sequence consisting of the nucleic acid sequence of SEQ ID No: 3; and
- (d) a nucleotide sequence that is completely complementary to a nucleotide sequence of (a)-(c).

2. (Original) A nucleic acid vector comprising a nucleic acid molecule of claim 1.

3. (Original) A host cell containing the vector of claim 2.

4. (Original) A process for producing a polypeptide comprising culturing the host cell of claim 3 under conditions sufficient for the production of said polypeptide, and recovering the peptide from the host cell culture.

5. (Original) An isolated polynucleotide consisting of a nucleotide sequence set forth in SEQ ID NO:1 of claim 1.

6. (Original) An isolated polynucleotide consisting of a nucleotide sequence set forth in SEQ ID NO:3 of claim 1.

7. (Original) A vector according to claim 2, wherein said vector is selected from the group consisting of a plasmid, virus, and bacteriophage.

8. (Original) A vector according to claim 2, wherein said isolated nucleic acid molecule is inserted into said vector in proper orientation and correct reading frame such that the protein of SEQ ID NO:2 may be expressed by a cell transformed with said vector.

9. (Original) A vector according to claim 8, wherein said isolated nucleic acid molecule is operatively linked to a promoter sequence.

10.-16 (Canceled)
